Tools

- HTML
- CSS
- JavaScript (OOP, ES6)
- Redux, Redux Toolkit
- React Context
- Zustand
- Bootstrap
- Semantic UI
- Material UI
- Tailwind
- Framer Motion
- Git & GitHub

Libraries

- React Router Dom
- Auth.js
- Chart.js

Frameworks

- Reactjs
- Nextjs

PROJECTS

Salehunter

- Description

    Developing a search engine across Android, Desktop, and web platforms to compare product prices from e-commerce giants like Amazon and Jumia, alongside registered stores hosted on our platform. Enhancing user experience with real-time pricing, availability, and nearby store information.

- Technologies Used

    HTML – CSS – JavaScript – Reactjs – Restful apis -Nodejs for backend

- Role

    Frontend development, including implementing UI/UX designs and integrating with backend APIs.

TikTok Clone

- Description

    A TikTok clone developed using Next.js, featuring a responsive and dynamic interface. Includes functionalities such as video uploading, liking, commenting, and user profiles. Designed to deliver a seamless user experience similar to TikTok's popular app.

- Technologies Used

    Reactjs(Nextjs) – Tailwind – Sanity (CMS) – Zustand & Redux (State Management) - Typescript

- Role

    development using Next.js to build a TikTok clone. Integrated Sanity for content management, Zustand and Redux for state management, and Tailwind CSS for styling.

Booksy

- Description

    Developed a Books Library application using ReactJS to browse and manage a collection of books sourced from an online API. Implemented features to fetch and display book data, including title, author, and description. Incorporated pagination to efficiently navigate through large datasets. Designed a responsive user interface for optimal user experience across desktop and mobile devices.

- Technologies Used

    Reactjs – JavaScript – CSS – Rest API

- Role

    Integrating with an online API to fetch and manage book data, creating a responsive and intuitive user interface using ReactJS and CSS frameworks, Designing and implementing pagination to handle large datasets effectively.

Ideahub

- Description

    Developed a Blogs App using ReactJS and Next.js, featuring blog post display, user authentication with Auth.js, post creation using React Quill, and individual post browsing.

- Technologies Used

    Nextjs – Auth.js – React Quill – JSON-SERVER - CSS Modules

- Role

    Developed a Blogs App using ReactJS and Next.js. Managed all aspects of frontend development, including user authentication with Auth.js, implementing the post creation feature using React Quill, and ensuring smooth navigation for browsing individual posts.
